PERU, YOUR IDEAL PLACE TO INVEST

MINING COUNTRY FULL OF OPPORTUNITIES

Its geological wealth, the availability of quality cadastral and geological information, the supply of top-tier suppliers and the current legal framework that promotes private investment in the country, make Peru one of the most attractive destinations for mining investment in the world.

MINING COUNTRY

Peru is a country with an ancient mining tradition, which is maintained and cultivated thanks to the presence of leading international companies. We have an enormous geological potential, the presence of the Andes Mountain Range throughout the territory, constitutes our main source of mineral resources. At a global and Latin American level, Peru is among the leading producers of various metals (gold, silver, copper, lead, zinc, iron, tin, molybdenum, tellurium, among others), which is a reflection not only of the abundance of resources and the production capacity of the Peruvian mining activity, but of the stability of the economic policies in our country. The minerals produced in Peru are in great demand in the current and future global market, whose development is based on production and industry.

The United States, China, Switzerland, Japan, Canada and the European Union are the main applicants. Peru is the second largest producer of silver, copper and zinc worldwide. Likewise, it is the first producer of gold, zinc, tin, lead and molybdenum in Latin America. The Andes Mountains are the backbone of Peru and the main source of mineral deposits in the world.

Peru has an important geological potential. It is the first country in the world in silver reserves and is among the first in other basic and precious metals (US Geological Survey - USGS). In addition, the supplies and services that the mining industry needs are widely available in the local market, making Peru a privileged place for mining in South America. Peru also has great potential in non-metallic minerals also known as Industrial Minerals: travertine marble, diatomite (first producer in South America), bentonite and borates. Indeed, Peru is among the few countries in the world where large deposits of these minerals can be found.

INVESTMENT OPPORTUNITIES

The opportunities offered by our country have made us one of the countries in the region with the highest investment in mining, with outstanding results and the presence of leading global mining companies.

Projected investments for the coming years in exploration, exploitation and mining expansions exceed US\$56,158 million. The estimated portfolio of these mining projects highlights very important investments in Cuzco, Cajamarca, Moquegua, Tacna, Ica, Lima, Arequipa, Junín, Piura, Ancash, Huancavelica and Lambayeque.

INVESTOR EFFECTIVE PROTECTION

Peru has signed 32 International Investment Agreements that support its liberalization policy, with countries in the Pacific, Europe and Latin America. Peru has improved its standards in the negotiation of International Investment Agreements to consolidate a stable and predictable investment climate,

Peru is also a member of MIGA and a signatory to the ICSID (International Center for Settlement of Investment Disputes) Constitutive Convention, as well as the New York Convention on the Recognition and Enforcement of Foreign Arbitral Awards.

Australia **Peru** Chamber of Commerce

WE ARE APCCCI

We are a non-profit organization that aims to build quality relationships to promote trade and investment between Australia and Peru.

During IMARC, of coordinating and positioning the participation of the sponsors and the Peruvian delegation in this important global mining event.

SPONSOR COPPER

In order to improve the research and development of the mining industry, as well as the industry in general, BIZALAB has implemented a mineralogical characterization laboratory that responds differently compared to conventional analysis services. The laboratory has state-of-the-art equipment and a highly qualified staff that responds to the particular needs and objectives of our clients. We are experts in mineralogical characterization, applicable to the different fields such as geology, metallurgy, construction and research. It is also important to highlight that mineralogical characterization is a fundamental step for the optimal use of the mineral resource. In doing so, the professional has the necessary information for the ideal interpretation and understanding for effective surveying and exploration. It also allows the metallurgical control processes, thus optimizing the overall performance of the plant.

Erika Gabriel Tuesta

General Manager
Bizalab

Graduated in Chemistry from the National University of Engineering (UNI), graduated from the School of Metallurgical Engineering and studied a Master's Degree in Chemical Sciences at UNI and the MMBA Mining Management of the GERENS Postgraduate School, using an International Certification in Management of PMP Projects (Project Management Institute). She was a Researcher in the Materials Laboratory of the Faculty of Sciences of the UNI, and until 2015, she was Deputy Manager of the Laboratory of Mineralogical Characterization of Buenaventura Ingenieros S.A. (BISA). He is currently General Manager of the BIZALAB Laboratory, with more than 20 years of experience in materials science research, being a specialist in various characterization techniques such as XRD, XRF, XPS, SEM, TEM, TG-DSC, SBET, among others. others; she receiving training at universities in the Basque Country, and Alicante (Spain), San Luis and CETMIC (Argentina), Concepción (Chile) and Bruker AXS Advanced (Karlsruhe-Germany).
